EVIDENCE WORKSPACE / SYNTHETIC CASE FILES

Repair the request. Show the record.

A returned extra-work request, reconstructed from the documents a small contractor already has. Every number cited. Every refusal explicit.

THE EXPENSIVE MOMENT

The work happened. The request came back.

Small specialty contractors do not lose extra-work claims because they lack a dashboard. They lose them after the work is done, when the request returns and the evidence is spread across an invoice, a ticket, an email, and a contract.

The workaround is an evening with a spreadsheet and an inbox search. The risk is a second, weaker request that overstates the case.

COR-184 / HARBOR ANNEX

CHG-207 / NORTHGATE

OBJECTION 01 / DUPLICATE

“The scissor lift appears billed twice.”

APEX RETURN NOTE

OBJECTION 02 / RATE

“We do not have written approval of the $150 overtime rate.”

APEX RETURN NOTE

OBJECTION 03 / SCOPE

“Confirm this work sits outside the base scope.”

APEX RETURN NOTE

THE PRODUCT INSIGHT

Work evidence is not price authority.

> **A signed field ticket can prove the crew was on site for sixteen hours — and still be unable to approve a rate.**
>
> PRODUCT PRINCIPLE, NOT A CHATBOT DISCLAIMER

Most document tools blur the line between what happened and what was agreed. ExtraWork keeps the distinction visible, and makes the missing authority a first-class output.

01 / THE OBJECTION	Kept in the counterparty's words, unchanged.
02 / THE EVIDENCE STATE	Supported, missing, contradicted, or ambiguous. Never a guess.
03 / THE MONEY	Integer cents. Changed only by a recorded reviewer decision.

CASE 01 / COR-184 / HARBOR ANNEX

The lift is billed twice.

> **"The scissor lift appears billed twice."**
>
> OBJECTION 01 / APEX RETURN NOTE

The cost export repeats L3 and L4. Invoice INV-902 lists the lift once, at $1,000. The second line is the duplicate.

invoice-902.txt | cost-export.csv

LINE	WHAT IT SAYS	AMOUNT
L1	Friday overtime labor	$2,400.00
L2	Conduit and wire	$2,400.00
L3	Scissor lift Friday	$1,000.00
L4	~~Scissor lift Friday~~ DUPLICATE	$1,000.00

SUBMITTED **$6,800** → SUPPORTED NOW **$5,800**

−$1,000.00

Changed only after the reviewer clicks **Remove the duplicate**.

CASE 01 / OBJECTION 02 / THE REFUSAL

Hours are not a price.

> **“Crew of 2, 16 overtime hours… No rates stated.”**
>
> FIELD TICKET / 2026-10-16

The ticket proves the crew was on site. It cannot approve the $150 rate. The rate sheet says $125; the request uses $150. No written approval is attached.

STATE	RESERVATION	NEXT REQUEST
UNRESOLVED	Rate is not approved	Written approval of the $150 rate

WORK EVIDENCE

16 OT HOURS

SUPPORTED

field-ticket.txt

PRICE AUTHORITY

$150 / HR

MISSING

requested; no written approval attached

New evidence flips one finding, not the narrative.

CASE 02 / CHG-207 / NORTHGATE PLANT

Twelve billed. Ten received.

QUANTITY / SUPPORTED

“The valve package was billed for 12; the signed receipt shows 10.”

The signed receipt supports a two-unit short shipment. The line is adjusted, not deleted.

SUBMITTED
$8,700 → SUPPORTED $7,800

−$900.00

TICKET / UNRESOLVED

“There is no signed ticket for the second crew on Saturday.”

A direction to work is not a timesheet. The objection stays open, with a precise next request instead of a guess.

STATE	UNRESOLVED
NEXT REQUEST	Signed Saturday ticket or written time authorization

TWO FAILURES. ONE PROTOCOL.

HOW IT WORKS

Read. Join. Check. Record.

01

READ

Extract exact quotes from invoices, tickets, emails, and contract pages. Hash every document.

02

JOIN

Zetaris joins project lines to registered evidence extracts. Fixed SQL; no model-authored query.

03

CHECK

Rust applies the rules in integer cents. Evidence and price authority stay separate.

04

RECORD

Meterless records the revision. Replay must be unchanged; the packet carries citations.

HUMAN CONTROL

Accept the correction. Request the missing record. Leave the reservation.

NO AUTO-APPROVAL
NO MODEL-SET TOTALS

THE PROOF LEDGER

No logo-only integrations.

ZETARIS

LOCAL GATEWAY 2.4.3

4 + 5 EXTRACTS

joinMode	zetaris_live
query	closed
source	lines + extracts
case ids	COR-184 / CHG-207

```
SELECT p.line_id, e.document, e.excerpt
FROM project_lines p LEFT JOIN evidence_extracts e …
```

NVIDIA NEMOTRON

VIA NEBIUS TOKEN FACTORY

3 + 3 TOPICS

model	Nemotron-3-Nano-30B-A3B
validation	0 rejected
routing	topics drive checks
fallback	deterministic

Exact quotes are validated against the source; the model never calculates a total.

METERLESS

WORLD MODEL / REPLAY

8 of 8 CONFORMANCE

replay	unchanged
commit	1742dec5
events	97
engine	world-model

Every revision is projected; the case can be replayed without changing the answer.

The model classifies. Rust computes. The reviewer decides.

LIVE PATH / 2026-10-23

THE ASK

A smaller, more honest product.

WHO IT IS FOR

The owner or office manager of a small specialty contractor, handling change orders themselves or with a bookkeeper.

NEXT VALIDATION

Three permissioned returned requests, reviewed by a contract administrator. Measure preparation time and packet completeness.

WHAT SHIPS

Two synthetic cases. Live local Zetaris. NVIDIA Nemotron. Meterless. A 1:54 narrated demo.
